# IN THE CLAIMS

Please cancel Claims 1-14 without prejudice.

Please add the following new claims:

~~1-15.~~ A method for retrieving a desired entity of a desired entity type from a relational database, wherein said desired entity is related to a provided entity by a provided relation type associating an entity type of said provided entity with said desired entity type, said method comprising:

- retrieving a specific relation type record defining said provided relation type from a relation definition table;
- retrieving a specific relation instance record defining a relation of said provided relation type between said provided entity and said desired entity from a relation instance table corresponding to said specific relation type record;
- retrieving a desired entity type record containing said desired entity type from an entity definition table, wherein said desired entity type record specifies a desired entity instance table associated with said desired entity type; and
- retrieving said desired entity from said desired entity instance table.

2~~16~~. The method of claim ~~15~~<sup>1</sup>, wherein said relation instance record specifies said desired entity by said desired entity type and a desired record identifier.

3~~17~~. The method of claim ~~16~~<sup>2</sup>, wherein said desired entity is identified by said desired record identifier in said desired entity instance table.

4~~18~~. The method of claim ~~15~~<sup>1</sup>, wherein said retrieving a specific relation type record defining said provided relation type from a relation definition table comprises:

retrieving a table identifier for said relation instance table from said specific relation type record;  
and

retrieving said specific relation instance record from said relation instance table based on said specific relation type record and said provided entity.

5~~19~~. The method of claim ~~15~~<sup>1</sup>, further comprising retrieving data specifying said provided relation type from an inquiry table.

6~~20~~. The method of claim ~~15~~<sup>1</sup>, further comprising retrieving data specifying said provided entity from an inquiry table.

7~~21~~. The method of claim ~~15~~<sup>1</sup>, further comprising retrieving a second desired entity type record containing a second desired entity type from said entity definition table, wherein said second desired entity type record specifies a second desired entity instance table associated with said second desired entity type.

8~~22~~. The method of claim ~~21~~<sup>7</sup>, further comprising retrieving a third desired entity type record containing a third desired

entity type from said entity definition table, wherein said third desired entity type record specifies a third desired entity instance table associated with said third desired entity type.

<sup>9</sup>~~23~~. The method of claim <sup>1</sup>~~18~~, further comprising retrieving a second specific relation instance record defining a second relation of said provided relation type between said provided entity and said desired entity from a second relation instance table corresponding to said second specific relation type record.

<sup>10</sup>~~24~~. A relational database processing system comprising:  
 an entity definition table containing a first entity type record defining a first entity type;  
 an first entity instance table associated with said first entity type;  
 a plurality of entity instance records stored in said first entity instance table;  
 a relation definition table containing a first relation type record defining a provided relation type;  
 a first relation instance table associated with said provided relation type; and  
 a first relation instance record of said provided relation type, said first relation instance record relating a desired entity in one of said entity instance records to a provided entity.

<sup>11</sup>~~25~~. The relational database processing system of claim <sup>10</sup>~~24~~, wherein each of said entity instance records is identified by a record identifier.

<sup>12</sup>~~26~~. The relational database processing system of claim <sup>10</sup>~~24~~, wherein said first relation contains a desired record

identifier and a desired entity type corresponding to a desired entity instance record containing said desired entity.

<sup>13</sup>  
<sup>10</sup> ~~24~~. The relational database processing system of claim ~~24~~, wherein said first relation type record comprises a table identifier identifying said first relation instance table.

<sup>14</sup>  
<sup>10</sup> ~~24~~. The relational database processing system of claim ~~24~~, further comprising an inquiry table containing an inquiry record, wherein said inquiry record specifies said provided relation type and said provided entity.

<sup>15</sup>  
<sup>10</sup> ~~24~~. The relational database processing system of claim ~~24~~ further comprising:

a second entity instance table associated with a second entity type; and

wherein said entity definition table contains a second entity type record containing said second entity type and associating said second entity instance table with said second entity type.

<sup>16</sup>  
<sup>10</sup> ~~24~~. The relational database processing system of claim ~~24~~ further comprising:

a third entity instance table associated with a third entity type; and

wherein said entity definition table contains a third entity type record containing said third entity type and associating said third entity instance table with said third entity type.

<sup>17</sup>  
<sup>10</sup> ~~24~~. The relational database processing system of claim ~~24~~ further comprising:

a second relation instance table associated with a second entity type; and
